## **The leader in humane bird scarers, pest control & bird control**

Bird Gard has spent 20 years refining and designing the ultrasonic pest & bird control product range. BirdGard uses award winning devices that are non – toxic, environmentally friendly and humane for dispelling birds and pests. BirdGard Pvt Ltd has been recognized worldwide as the bird control experts.

### **Commercial and Industrial Buildings**

BirdGard has developed pest and bird control devices for commercial and industrial buildings. Birds like pigeons are common pests around office buildings and warehouses. BirdGard has engineered ultrasonic bird control devices which can't be heard by human ears so they won't disturb people working in the buildings.

- Bird droppings are unsightly and cause dangerous, slippery working conditions causing HR problems.
- Bird droppings are corrosive to many materials including steel and concrete, especially when combined with the effects of salt (from oceans or roads) and/or harsh weather. This corrosion can and does weaken structural integrity.
- Bird droppings are unhealthy—even potentially fatal. At least sixty transmittable diseases have been associated with birds and their excrement

## PIGEON GARD

**(FOR REMOVAL OF PIGEONS AND STARLINGS FROM BUILDINGS)**

Sonic and Ultrasonic have separate controls and may be switched ON or OFF independently of the other to allow for varying circumstances such as proximity to people, noise considerations, pests controlled such as pigeons and starlings.

### Sonic

- Two are actual natural distress bird sounds
- Two are artificial harassment sounds
- Freq
  - Actual bird sounds -3 -6Khz
  - Harassment sound -3-10Khz
  - Sound pressure level at 1 m from speaker is 95 to 105db

### Ultrasonic

- Active Human hearing sound range
- Freq
  - LOW - 15- 19 KHZ
  - MEDIUM - 18 - 20 KHZ
  - HIGH - 20 - 23 KHZ
  - Sound pressure level at 1 m from speaker is 100 to 110 db

- Pigeon Gard will force birds out from trouble spots
- Pigeon Gard uses high frequency Ultrasonic sounds and low frequency audible sonic harassment (irritant) sounds + Predatory sounds
- Individual sounds can be turned ON/OFF independent of other sounds
- Most Pigeons are removed within a week of use of equipment.
- Covers an area of 50 meter diameter
- Device can work remotely, unmanned, on a timer.
- Device includes a 30 meter cable, a 240V adapter and 4 speakers
- Devices can be mounted low for easy access
- Speakers mounted high for bird activity

## **BIRDGARD LASER**

**(Hand-held laser device that provides a convenient, effective and humane approach for driving birds away from areas where they are not wanted)**

### **Laser (Red 80)**

<ul style="list-style-type: none"><li>• <b>Hand held</b></li><li>• <b>Environment friendly</b></li><li>• <b>Weight - 1 kg</b></li><li>• <b>Laser wave length - 650 nm</b></li><li>• <b>Power - 9 V alkaline batteries</b></li><li>• <b>Effective distance - 1200m to 1500m</b></li><li>• <b>Weather proof</b></li></ul>	<ul style="list-style-type: none"><li>• <b>Hazard zone for human eye 150 mm at narrowest beam setting</b></li><li>• <b>Tested and proven against most species of birds; long term solution</b></li><li>• <b>No noise, no chemicals</b></li><li>• <b>Integral key lock, power- on LED, trigger safety, 3 sec trigger delay</b></li><li>• <b>Warranty for 12 months</b></li></ul>
---	---

## EAGLE KITE

**(Virtually all bird species have an instinctive fear of raptors  
(birds of prey) and usually will avoid flying in the vicinity of one)**

- **It looks so real it's hard to tell and maybe that's why it works so well**
- **Pigeons and other birds have an instinctive fear of raptor birds**
- **Usually avoid flying in the vicinity of one**
- **Has a 5.5 meter pole with a swivel attachment**
- **A 2.5 m string attaches it to the eagle beak**
- **Kite flies around the pole**
- **It hovers and flaps its wings, dives and weaves in the breeze very life like**
- **Made of TYVEK a space age material made by NASA**
- **Light weight, water resistant rated up to 40 Kph**

## VERMIN X

(A Transonic device specially designed for control of mice and rats)

- Uses a transonic device
- Range of up to 30 m
- Up to six speakers can be attached (standard set is provided with four speakers) to stretch over 100 m
- Ideal for running around the perimeter of a ware house and grain silos
- Changing sounds
- Works on 12V and 240V

## PRO AMP

**(Ideal to repel birds in Industrial Yards and Agricultural land, protects up to 30 acres of land)**

- **Item: Pro Amp Sound Generator**
- **Height: 285 mm**
- **Width: 200 mm**
- **Depth: 141 mm**
- **Weight: 1.5 kg**
- **360 degree stacked speakers**
- **Delivers 125 db of digital sound**
- **Uses combinations of harassment, distress and predator calls**
- **Easily installed**
- **Operates on 12 V battery and 40w solar panel**
- **Protects up to 30 acres**
- **Other: Power input 12 VDC (3**

## **YARD SENTINEL**

**(Protects against yard and garden pests  
Such rats, mice, dogs and cats)**

- **The Yard Sentinel generates adjustable sound waves from 15 kHz – 25 kHz.**
- **Ultrasonic**
- **Infrared Motion Sensor**
- **Adjustable frequency**
- **Uses 240v adaptor**
- **10m extension cord**
- **Weather resistant**
- **Environmentally Friendly**
- **The effective range of sensor is up to 100 metres through to 170 degrees.**
- **option of a built-in motion sensor**
- **sensor that activates the unit when animals move into its coverage zone which is 24 x 15 meters.**

**BIRDGARD LASER (Static)**  
**(Provides a convenient, effective and humane approach for driving birds away from areas where they are not wanted)**

- can be operated off of 110v or 220/240v
- remote control with a range of approximately 27 meters
- maximum range of 300 meters with estimate maximum coverage of 3048 square meters
- The beams create 45 different patterns occurring in random order
- Environment friendly
- Tested and proven against most species of birds; long term solution
- No noise, no chemicals
- Warranty for 12 months

## ULTRASON

(Repels birds from inside building by using ultrasonic sounds)

- **Ultrasonic Bird Repeller is a small compact "all in one" Repeller**
- **Bird Repeller has digitalized recordings of ultrasonic distress, predator and harassment sounds that are effective on Pigeons**
- **The Ultrasonic Bird Repeller is a 12 volt unit which will run either on a 240 v using an adaptor.**
- **Additional feature of plug in an additional extension speaker with 30m of cable to project sound from another spot remote from the actual control unit thus covering a bigger area**
- **It can be programmed for flexibility in time of play**
- **Ultrasonic Bird Repeller works best on random mode and played on full volume**

## SOLAR SNAKE REPELLER

(Used to effectively repel snakes)

- The solar power device creates pulsing vibration waves through the ground
- The waves can effectively repel snakes up to a 30 meter diameter area
- The pulsing vibration waves simulate danger to a snake. The snake senses this through its body
- Once the snake enters the defensive area, the pulsing vibration irritates the snake which encourages it to depart that location.
- The Solar Snake Repeller is powered by a solar cell and a rechargeable accumulator stores power for operation at night.
- When the accumulator is fully charged, it can supply enough power for night operation, thereby ensuring a continuous around-the-clock repeller
- Frequency: 400HZ-1000HZ  
Working Range: about 625 square meters
